* Tested and licensed for human use

💡 Did you know?

Biofilms are **planktonic bacteria**, which attach to wound beds within minutes and form strongly attached microcolonies of proteins and sugars within 2-4 hours. This coating restricts the wound's ability to heal, causing wounds to remain or become chronic. Wounds treated with Prontosan® Wound Irrigation can **help reduce biofilms by 87%** when compared with traditional wound rinsing solutions.⁷ (Figure A)

Figure A - Comparison of the efficacy of wound rinsing solutions on biofilm.⁸

3M55077			Large Blanket	10 ea/ca
3M90047			Replacement Filters	each

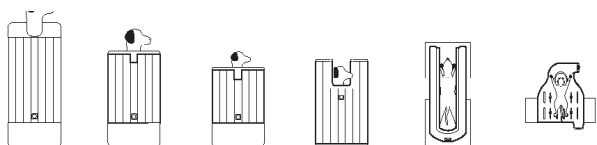

Warming with a **forced convective air blanket** has been shown to help **medium-sized dogs maintain body temperature during prolonged anesthesia** better than other methods of patient warming.¹³ Warming with a forced air blanket also **minimizes anesthetic-induced hypothermia in cats.**¹⁴

Did you know?

There are **many different blanket configurations** for each surgical need.

Blanket Configurations¹⁵:

iPM12 Vet and iMEC-8 Vet

Safety and efficiency for veterinary monitoring. Available as portable designs with the ability to add advanced parameters.

Item No.	CDMV Item No.	VP Item No.	Description	Packaging
